

# Electronic Access Control

## SOLUTION BRIEF

Today's advanced electronic access control solutions provide hoteliers with new standards in security, manageability, and scalability. These touch-free door locking systems are wire-free and keyless, and available in a variety of designs, colors, and finishes to complement any property's style and door type.

Corserva has the experience to install and manage access control deployment projects for single location boutique hotels as well as large multi-location hotel corporations.

We provide and support electronic access control solutions from a variety of world-class manufacturers. We can design you a customized access control solution plus perform complete installation of all access control components and ongoing support.

### BENEFITS

#### Deliver a superior guest experience

Remove one of the most common barriers to a seamless registration process by enabling guests to skip the front desk and instead use their smartphone to check in and out. When a guest's smartphone doubles as a room key, distribution of key cards is eliminated. No more lost or stolen keys. No more tracking of "master" keys.

#### Comprehensive 24x7x365 access control

Improve operations from back-of-house to front desk and manage all access points through a single software platform. Connect third-party systems with doors and locks to integrate security into a centralized solution. Manage access throughout a property from one central location.

#### Gain advanced reliability

Today's advanced electronic access control solutions effectively manage property security and improve guest experience, while streamlining staff management activities.

### FEATURES

- ✓ Wire free, read/write, networked locks that communicate with a central database
- ✓ Seamless integration with other systems including CCTV, parking, license plate recognition, biometrics, fire alarm, physical security, building services, and time & attendance systems
- ✓ Scalable to 65,000 doors and 4,000,000 users
- ✓ Compatible with most common RFID technologies
- ✓ Bluetooth enabled options for control via smartphone apps
- ✓ Granular management of access privileges
- ✓ Upgradable locks and software to protect against obsolescence
- ✓ Battery free, waterproof keys available as cards, fobs, and bracelets
- ✓ Energy saving device options to control energy use in unoccupied rooms
